

ABOUT JTS

Our Story

The JTS story begins in 2004, due to a lack of custom products for commercial and industrial cooling needs. We provide a customized solution manufactured and designed for your specific requests, rather than just selling you what might work from a product line.

Our Mission

JTS exists to provide customized solutions to our customers. Our highly qualified team is dedicated to constantly improving our product and refuses to sacrifice quality. JTS will always follow through on our processes to ensure the successful completion of projects and satisfied customers.

The JTS Difference

JTS provides an exceptional level of service, equal to the quality of our products. Our team is committed to creating excellence that supports our customers' requests. We are devoted to ensuring successful project completion while cultivating long-term customer relationships.

YOUR TRUSTED PARTNER FOR ENGINEERED COOLING SOLUTIONS

Products to fit any of your application needs

CHILLERS

Whether you have a small load that needs a compact design, or a large load with a tremendous amount of variability, JTS can provide the right solution for you. Our chiller series allows for a high degree of customization to meet any of our customers' application needs.

CONDENSING UNITS

JTS builds high-quality condensing units for commercial and industrial cold storage applications. Our condensing units are designed for efficiency, reliability, and serviceability. These units are available with a wide range of options in single, parallel, and dual-piped compressor configurations.

REFRIGERATION RACKS

We understand that within the rack system lives the brain of your cooling process, so not only is it expected to provide a large amount of consistent cooling power, but it is also expected to control temperatures, compressors, condensers, and defrost, as well as other rack functions. Our commercial and industrial refrigeration racks are designed per each customer's application and requests to ensure that all of these needs are met.

CUSTOM BUILDS

We know that every customer has their unique application conditions, so let our team of experts guide you through our process and develop the right solution.

PACKAGED AIR-COOLING SYSTEMS

Our Packaged-Air Cooling systems are designed to be portable and robust, which makes them a strong solution for occasions that may require additional capacity. Our systems are available up to 50HP for cases such as existing system failure, in which it is crucial that an immediate solution is present. They also have the capability to assist with temporary cooling requirements, or for rental or lease equipment.

Designed to fit roll-up doors under 13 feet wide, these packaged systems include the condensing unit, evaporator, and microprocessor controller. They are available with air or electric defrost provisions, and all systems are factory-charged with refrigerant and ready to go when delivered and installed.

Always Custom

From the beginning to completion, we guarantee we will supply the right solution to your critical application, never just a "standard model"

Always Developing

Our team is consistently working to improve so we can make sure you are always getting the highest quality equipment.

Always Our Best

We are committed to supporting our equipment and customers' needs. We are dedicated to providing you with our best service and quality, every time.
